

Type de danger :

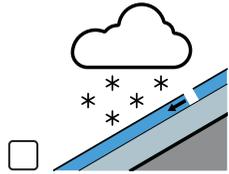

Accidentel (Déclenchements provoqués)

Naturel (Départs spontanés)

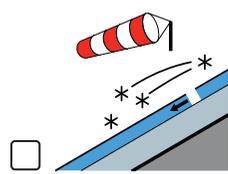

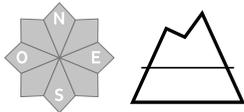

Degré de danger :

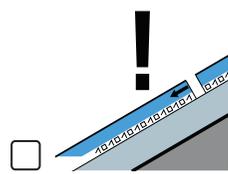

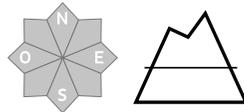

1. Quelles situations avalancheuses typiques ?

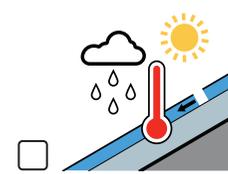

Neige fraîche

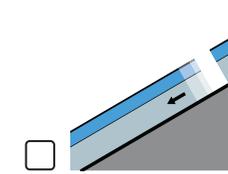

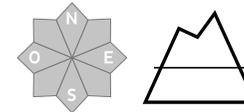

Neige ventée

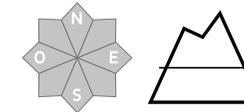

Sous-couche fragile persistante

Neige humide

Avalanches de glissement

2. Localisation ?

Zones critiques spécifiques

Près des crêtes

Même loin des reliefs

Versants froids

Pentes ensoleillées

3. Taille ?

- 5. Av. exceptionnelles
- 4. Très grandes av.
- 3. Grandes av.
- 2. Av. moyennes
- 1. Coulées

4. Observables, indices d'instabilité, autres dangers ?

Avalanches récentes

Brouillard

Neige dure

Transport en cours

Vent

Manque de neige

Surcharges nouvelles

Chaud / froid

Humide / profonde
